

THE MOST COMMON REASONS TO REMOVE A TREE

SAFETY

Dead, diseased and damaged trees threaten the safety of your property and family. Any tree that is structurally impaired due to storm damage, disease or another problem, runs the risk of falling. When you remove a tree by choice, you have control over the process and can ensure it's removed safely. The process will likely be completed in sections to avoid to damage to your home, landscaping features and other nearby trees.

PERSONAL PREFERENCE

Not all trees are created equal. Maybe you used to love it and are tired of cleaning up after it, or maybe you never liked it at all. Maybe you'd rather use that space for a beautiful garden or a new pool – the choice is up to you. If you're tired of a tree for any reason, it's time to have it removed -- but we recommend not going it alone. All too often we see half-completed tree removal projects, or homeowners start the process without thinking about removing the stump after, and it languishes in the yard for years after.

STRUCTURAL PRESERVATION

Tall trees aren't the only thing that threatens your home – what about their root system? A 2009 Virginia Tech study estimates that the ratio of root radius to trunk diameter for young trees is about 38 to 1. That means that an 8" tree, for example, could have a root system spanning a 25-foot diameter. As trees get taller and older, their root systems become thicker and, in a never-ending search for moisture, more likely to clog your pipes and disturb the foundation of your home.

CONVENIENCE

Flowering trees and pollen-laden varieties, such as live oak, are attractive to look at, but many homeowners tire of cleaning up after them. If you have a pollen allergy, are tired of petals covering your car or patio furniture, or simply don't have time to spend hours outside every fall and spring taking care of your trees and yard, then removing them is a great option. Mister Tree makes tree removal service in Memphis and the surrounding areas hassle-free. Get started today by scheduling a free consultation.

ENCROUCHING TREES

A tree's canopy brings shade and other benefits to your home, but if you have too many, they can prevent the ones you want from growing properly. Your existing trees can't grow tall, straight and healthy if they're competing with saplings and less desirable trees for sunlight, water and nutrients. If you want to encourage the growth of specific trees, removing the unwanted ones is the best decision you can make.

The bottom line? If you've got a tree on your property and it's a safety risk -- or you simply don't like it anymore -- remove it. Our team of certified arborists is standing by, waiting to inspect the health of the tree in question and advise you in the best course of action. Contact us today.
